

CBN 镀覆产品

电镀产品

Electroplating coating product

采用技术成熟的电镀工艺，根据客户要求，对磨料进行增重不同的镀镍处理，有效提高砂轮寿命。

Adopting mature electroplating technology, abrasive is plated with different proportion of nickel, which can effectively improve grinding wheel life.

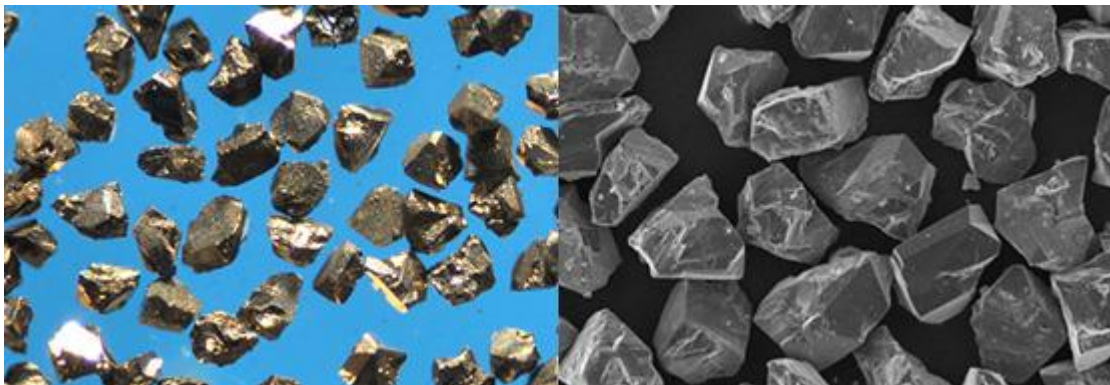

镀钛产品

Titanium coating product

“T”为表面镀钛产品，主要适用于金属和陶瓷结合剂系统，镀钛后可保护磨料性能，更耐高温，有效提高砂轮寿命。

"T" refers to product with titanium-coated surface, and mainly applicable for metal and vitrified bond system. After titanium coating, it can protect the abrasive performance to get higher thermal resistance, and effectively improve the life of the grinding wheel.

化学镀产品

Chemical coating product

采用技术成熟的化学处理工艺，对磨料进行增重镀镍处理，极大增强了颗粒之间的把持力和散热能力，改善工件的表面光洁度。

Adopting the mature chemical processing technology, the abrasive is treated with weight increase and nickel coating, which greatly enhances the holding force and heat dissipation ability between the grains and improves the surface finish of the workpiece.
